The British Association of Experimental Biologists

To promote intercourse between experimental biologists within the United Kingdom and to encourage facilities for the publication of experimental work, it is proposed to form an association of experimental biologists.

Any interested in the proposal are requested to communicate with the Managing Editor of the Journal, at the Animal Breeding Research Department.

TO CONTRIBUTORS

The British Journal of Experimental Biology will publish original contributions in genetics, experimental embryology, comparative physiology, and histological, cytological, or morphological subjects having a direct bearing on problems of experimental interest.

All communications should be addressed to the Managing Editor, at the ANIMAL BREEDING RESEARCH DEPARTMENT, THE UNIVERSITY, EDINBURGH.

Contributions should be sent in double-spaced typescript on one side only of the paper.

In view of the present cost of printing and the intention of the Editors to publish regular reviews of recent progress in different fields of research, authors are requested to minimise space devoted to historical introductions and theoretical discussions.

Except in certain circumstances it is not intended to publish any illustrations other than diagrams and actual photographs reproduced in line or by the half-tone process.

Bibliography should be given under the heading “References” in the following form: Surname of author (in alphabetical order), date of publication, title of journal, volume of journal in arabic figures, and, if desired, page of reference. When the title of the paper itself is included it should follow immediately the date of publication.

Every paper must be accompanied by an abstract not exceeding 500 words in length, and must contain a summary of the chief results of the enquiry.

Authors who wish to expedite publication are requested to limit their communications to about 6000 words.

The date on which the MSS. is received by the Editor will appear with each paper.

Authors will receive fifty gratis reprints with additional copies at reduced rates.
AN IMPORTANT REFERENCE WORK

FRESH WATER BIOLOGY

BY

H. B. WARD, Professor of Zoology in the University of Illinois
AND
Q. O. WHIPPLE, Professor in Harvard University

With the collaboration of a Staff of Specialists

All interested in aquatic biology will find here answers to their
queries on methods of study, conditions of existence, types of life,
and interrelations of the organisms that inhabit fresh-water bodies,
together with data on their life-histories, habits, and range.

A comprehensive general discussion of each group precedes the
description of individual forms which are arranged under a key to
permit of rapid and accurate determination of the genera and species.

1123 pages, 6 x 9. 1547 Figures. Price 36/- (Postage 1/-)

CHAPMAN & HALL, Ltd., 11 Henrietta St., LONDON, W.C.2

That Book you want!

Foyles can supply any Scientific Book that is in print and most of those
that are out of print. They have a Special Department for this class of
literature under a Manager who has experience and knowledge of the
Natural Sciences. Call and consult him, or write and you will get an
intelligent reply. Books sent on approval. Over a million volumes
Second-hand and New on every conceivable subject in stock. Catalogues
gratis and post free on request. Mention requirements or interests.

That Book you do not want!

Foyles will buy it—A single volume up to a library.
Expert valuers sent any distance
