THE FOOD OF THE BROWN TROUT (SALMO TRUTTA L.), By F. T. K. Pentelow.—THE FORECASTING OF THE EAST ANGLIAN HERRING FISHERY. By William C. Hodgson. (With four Figures in the Text.)—AN ECOLOGICAL RECONNAISSANCE IN WEST GREENLAND. By T. G. Longstaff. (With Plates VI–IX.)—SOME FACTORS INFLUENCING THE DISTRIBUTION OF CERTAIN PROTOZOA IN BIOLOGICAL FILTERS. By D. Ward Cutler, L. M. Crump and A. Dixon.—CLIMATE IN CAVES AND SIMILAR PLACES IN PALESTINE. By P. A. Buxton.—CONCERNING FLUCTUATIONS IN MARINE FOOD FISHES. By B. Storrow. (With one Figure in the Text.)—THE GREY SQUIRREL (SCIURUS CAROLINENSIS) IN THE BRITISH ISLES, 1930–1932. By A. D. Middleton. (With one Map.)—THE ROOKERIES OF THE ISLE OF WIGHT. By J. F. Wynne. (With two Maps and one Figure in the Text.)—SOME ECOLOGICAL FACTORS AND THEIR INFLUENCE ON COMPETITION BETWEEN STREAM AND LAKE-LIVING TRICLADS. By R. S. A. Beauchamp. (With nine Figures in the Text.)—NOTES.—NOTICES OF PUBLICATIONS ON ANIMAL ECOLOGY.—REVIEWS.

This Journal, which is intended to act as the organ of research on Animal Ecology in the British Isles, publishes primarily papers dealing with animals (such as population and migration studies and allied problems), and with methods of ecological research having reference primarily to animals. Two numbers are published each year, in May and November. Subscription for members of the British Ecological Society is 25s. per annum, and for non-members, or libraries and other institutions, 30s. per annum. The net price of single parts is 22s. 6d.

CAMBRIDGE UNIVERSITY PRESS
FETTER LANE, LONDON, E.C.4
Contributors can avoid delay in the publication of their work by con-
forming with the following arrangements:

The Journal of Experimental Biology will publish contributions in experimental biology and com-
parative physiology, whether zoological or botanical. Every paper must contain a summary of
the chief results of the enquiry. Authors are requested to present their work in as concise a form
as possible. They will receive 50 copies of their papers free; additional copies, not exceeding 100
(except in special cases), may be purchased and should be ordered when the proofs are returned to
the Editor.

All communications other than American manuscripts should be addressed to the Editor,

J. Gray, King’s College, Cambridge, England

American manuscripts may be sent to

Dr E. Ponder, Department of Biology, New York University
Washington Square, New York City

MANUSCRIPTS:

MSS. should be typewritten on one side only of the paper, and the pages should be numbered. All
paragraphs to be printed in small type should be indicated by adding a line at the side of the copy.
Tables and Legends should be on separate sheets from the rest of the MS. and should be numbered.
The place where they are to be inserted in the text should be indicated in the margin of the MS.
Bibliography should be given under the heading of “References” and in the following form: Sur-
name of authors (in alphabetical order), initials, date of publication, title of journal, volume and page
of reference. In the text a reference should be quoted by the author’s name and date (in brackets),
and not by the numerical order of the paper in the list of references. All names of journals and books
will be printed in italics.

ILLUSTRATIONS:

(i) Plates. Drawings should be executed on white drawing paper or card (yellowish backgrounds
should be avoided), and gummed on white card grouped and numbered in the order in which they
are to appear in the published plate. Exclusive of margin the plate-figures should not cover, when
reduced, an area greater than 7½ ins. in length × 5 ins. in width when ready for reproduction as a
single plate or 7½ ins. × 11¼ ins. in the case of double plates. All lettering should be put in faintly
with pencil. For the reproduction of photographs by the half-tone process a good glossy bromide
print is required. All lettering to appear on photographs should be shown in position on a covering
sheet of transparent paper. If a part only of the photograph is required it should be indicated in the
same way.

(ii) Line blocks should be used whenever possible. Illustrations should be pen drawings in Indian
ink (jet black and water-proof) on smooth white Bristol board, the lettering being temporarily and
lightly put in by the author with a soft pencil. It is best for the author to allow the skilled draughts-
man or type-setter to deal with the final lettering. The size of the lettering inserted into the original
drawing should be graded according to the degree of reduction that is desired in the final repro-
duction. All brush work, tinting, or pencil shading is to be avoided. Where considerable reduction
is required, it is essential that the drawing should be of such a character as to bear such reduction.

Charts and Curves are frequently drawn to best advantage on graph paper ruled in pale blue
since, whilst ensuring accuracy, the blue lines do not appear in the photograph, only the blackened
lines that are desired remaining.

PROOFSHEETS:

Authors will receive one set of slip proof for correction and return to the Editor. A page proof will
also be sent if the slip proof is marked by the author ‘Revise.’ An allowance of ten shillings per sheet
of sixteen pages will be made for alterations apart from printer’s errors. Authors will be charged
for any excess over this average.

THE SOCIETY FOR EXPERIMENTAL BIOLOGY

The Society exists for the promotion of experimental biology. It holds Conferences,
generally three times a year, at which the results of experimental investigations are
presented and discussed. The Journal of Experimental Biology is the medium of publication
of the Society. Enquiries about membership of the Society should be addressed to the
Secretaries:

W. H. Pearsall, Department of Botany, The University, Leeds
G. P. Wells, Department of Zoology, University College, London, W.C. 1
