Inside JEB

Simon Maddrell and 50 years of insect homeostasis
Solute and solvent transport mechanisms; Neuroendocrine control and development; Organismal and post-genomic views on osmoregulation; In conclusion

Editorial

Dow, J. and Skaer, R. Simon H. P. Maddrell. 325

JEB Classics

Dow, J. Where it all began (nearly). 327-328

Transport mechanisms

Beyenbach, K. W., Baumgart, S., Lau, K., Piermarini, P. M. and Zhang, S. Signaling to the apical membrane and to the paracellular pathway: changes in the cytosolic proteome of Aedes Malpighian tubules. 329-340

Huss, M. and Wieczorek, H. Inhibitors of V-ATPases: old and new players. 341-346

Spring, J. H., Robichaux, S. R. and Hamlin, J. A. The role of aquaporins in excretion in insects. 358-362

O’Donnell, M. J. Too much of a good thing: how insects cope with excess ions or toxins in the diet. 363-372

Onken, H. and Moffett, D. F. Revisiting the cellular mechanisms of strong luminal alkalization in the anterior midgut of larval mosquitoes. 373-377

Neuroendocrine control and development

Coast, G. M. Neuroendocrine control of ionic homeostasis in blood-sucking insects. 378-386

Davies, S. A. and Terhzaz, S. Organellar calcium signalling mechanisms in Drosophila epithelial function. 387-400

Dircks, H. Insect ion transport peptides are derived from alternatively spliced genes and differentially expressed in the central and peripheral nervous system. 401-412

Maddrell, S. Insect homeostasis: past and future. 446-451

Nicolson, S. W. Water homeostasis in bees, with the emphasis on sociality. 429-434

Dow, J. A. T. Insights into the Malpighian tubule from functional genomics. 435-445
