

Cover: Males in many species exhibit elaborate traits that both rivals and mates can evaluate. In peacocks, males perform a multimodal display during the breeding season in which they rattle their colorful feathers and shake their wings. Yorzinski et al. (pp. 1146–1153) demonstrate that peacocks selectively direct their attention toward their potential rivals during this display and primarily gaze at their lower feathers. Their gaze patterns closely match those of peahens assessing potential mating partners. Photo credit: J. Yorzinski.

INSIDE JEB

- 953** High-speed dolphins burn double calories; Achilles tendon exercises improve elderly mobility; Bearded dragons colour match their home territory; Birds do not work harder to breathe

CLASSICS

- 956** Is the hypoxic ventilatory response driven by blood oxygen concentration?
Milsom, W. K. and Wang, T.

METHODS & TECHNIQUES

- 959** Development of a vortex generator to perturb fish locomotion
Seth, D., Flammang, B. E., Lauder, G. V. and Tangorra, J. L.
- 964** A novel technique for the precise measurement of CO₂ production rate in small aquatic organisms as validated on aeshnid dragonfly nymphs
Harter, T. S., Brauner, C. J. and Matthews, P. G. D.

RESEARCH ARTICLES

- 969** Warm preconditioning protects against acute heat-induced respiratory dysfunction and delays bleaching in a symbiotic sea anemone
Hawkins, T. D. and Warner, M. E.
- 984** Interspecies comparison of the mechanical properties and biochemical composition of byssal threads
Bouhleh, Z., Genard, B., Ibrahim, N., Carrington, E., Babarro, J. M. F., Lok, A., Flores, A. A. V., Pellerin, C., Tremblay, R. and Marcotte, I.
- 995** The energetic cost of filtration by demosponges and their behavioural response to ambient currents
Ludeman, D. A., Reidenbach, M. A. and Leys, S. P.
- 1008** The Achilles tendon is mechanosensitive in older adults: adaptations following 14 weeks versus 1.5 years of cyclic strain exercise
