Conditioned Reflexes & Neuron Organization

Jerzy Konorski

Professor Konorski worked for many years under Pavlov in Leningrad. In this book he tries to extend Sir Charles Sherrington's conception of the functioning of the nervous system to the field of higher nervous activity, using the enormous experimental data collected by the Pavlov school but reinterpretting it from a new point of view. Pavlov’s doctrine is submitted to detailed criticism and an attempt is made to replace it by a more satisfactory explanation.
