The Journal of
Experimental Biology
CONTENTS

No. 1. MARCH 1954

H. Blaschko and Jean M. Himms. Enzymic oxidation of amines in decapods .......... 1

P. M. B. Walker. The mitotic index and interphase processes ...................... 8

R. E. Billingham and Elizabeth M. Sparrow. Studies on the nature of immunity to homologous grafted skin, with special reference to the use of pure epidermal grafts. (With Plates 1 and 2) ........................................ 16

R. A. Weller and F. V. Gray. The passage of starch through the stomach of the sheep .......................................................... 40

F. V. Gray, A. F. Pilgrim and R. A. Weller. Functions of the omasum in the stomach of the sheep ............................................... 49

J. A. Kitching. The effects of high hydrostatic pressures on a suctorian. (With Plates 3-5) .................................................. 56

J. A. Kitching. The physiology of contractile vacuoles. IX. Effects of sudden changes in temperature on the contractile vacuole of a suctorian; with a discussion of the mechanism of contraction ............................................. 68

J. A. Kitching. The physiology of contractile vacuoles. X. Effects of high hydrostatic pressure on the contractile vacuole of a suctorian ............. 76

E. J. Batham and C. F. A. Pantin. Slow contraction and its relation to spontaneous activity in the sea-anemone Metridium senile (L.) ............... 84

J. A. Ramsay. Active transport of water by the Malpighian tubules of the stick insect, Dixippus morosus (Orthoptera, Phasmatidae) .............. 104

Walter Popple and D. W. Ewer. Studies on the myoneural physiology of Echinodermata. I. The pharyngeal retractor muscle of Cucumaria ........................................ 114

W. Burke. An organ for proprioception and vibration sense in Carcinus maenas. (With Plate 6) .................................................. 127

Chien-Yuan Kao and Robert Chambers. Internal hydrostatic pressure of the Fundulus egg. I. The activated egg .......................... 139

No. 2. JUNE 1954

Anne Rowlands. The influence of water and light and the pituitary upon the pigmented system of the common toad (Bufo bufo bufo) .......... 151

Kathleen M. Downing. The influence of dissolved oxygen concentration on the toxicity of potassium cyanide to rainbow trout .......... 161

Barbara H. Dainton. The activity of slugs. I. The induction of activity by changing temperatures ........................................... 165

Barbara H. Dainton. The activity of slugs. II. The effect of light and air currents .......................................................... 188

No. 3. SEPTEMBER 1954

The late W. E. Agar, F. H. Drummond, O. W. Tiesgs and M. M. Gunson. Fourth (final) report on a test of McDougall's Lamarckian experiment on the training of rats | 307 |

Ellen Thomsen. Studies on the transport of neurosecretory material in Calliphora erythrocephala by means of ligaturing experiments. (With Plates 7–9) | 322 |

T. O. Browning. Water balance in the tick Ornithodoros moubata Murray, with particular reference to the influence of carbon dioxide on the uptake and loss of water | 331 |

D. M. Vowles. The orientation of ants. I. The substitution of stimuli | 341 |

D. M. Vowles. The orientation of ants. II. Orientation to light, gravity and polarized light | 356 |

W. T. W. Potts. The inorganic composition of the blood of Mytilus edulis and Anodonta cygnea | 376 |

John E. Treherne. The exchange of labelled sodium in the larva of Aedes aegypti L. | 386 |

Warren J. Gross. Osmotic responses in the sipunculid Dendrostomum zostericolum | 402 |

James D. Robertson. The chemical composition of the blood of some aquatic chordates, including members of the Tunicata, Cyclostomata and Osteichthyes | 424 |
Contents

J. M. MITCHISON AND M. M. SWANN. The mechanical properties of the cell surface. I. The cell elastimeter. (With Plate 10). (With an Appendix by D. G. ASHWELL) ........................................ 443
J. M. MITCHISON AND M. M. SWANN. The mechanical properties of the cell surface. II. The unfertilized sea-urchin egg ......................................................... 461

No. 4. DECEMBER 1954

E. G. HEALEY. The colour change of the minnow (Phoxinus laevis Ag.). II. Effects of spinal section between vertebrae 1 and 15 and of anterior autonomic section on the responses of the melanophores ........................................ 473
J. O. SPENCER AND E. B. EDNEY. The absorption of water by woodlice ........................................ 491
D. W. EWER AND ROELOF VAN DEN BERG. A note on the pharmacology of the dorsal musculature of Peripatopsis ........................................ 497
J. E. HARRIS AND H. P. WHITING. Structure and function in the locomotory system of the dogfish embryo. The myogenic stage of movement ........................................ 501
J. W. S. PRINGLE. A physiological analysis of cicada song. (With Plate 11) ........................................ 525
LORD ROTHSCHILD AND H. BARNES. Constituents of bull seminal plasma ........................................ 561
D. M. MAURICE AND A. FIDANZA. The structure of the yolk of the hen’s egg, investigated by means of its permeability to 88Br ........................................ 573
H. BARNES. Some tables for the ionic composition of sea water ........................................ 582
L. BAILEY. The respiratory currents in the tracheal system of the adult honey-bee ........................................ 589
G. A. HORRIDGE. The nerves and muscles of medusae. I. Conduction in the nervous system of Aurelia aurita Lamarck ........................................ 594
G. PARRY. Ionic regulation in the palaemonid prawn, Palaemon (=Leander) serratus ........................................ 601
W. T. W. POTTS. The rate of urine production of Anodonta cygnea ........................................ 614
W. T. W. POTTS. The energetics of osmotic regulation in brackish- and freshwater animals ........................................ 618
A. O. M. STOPPANI, P. F. PIERONI AND A. J. MURRAY. The role of peripheral nervous system in colour changes of Bufo arenarum Hensel. (With Plates 12 and 13) ........................................ 631
Index of subjects ........................................ 639
Index of authors ........................................ 643
THE QUARTERLY JOURNAL OF MICROSCOPICAL SCIENCE

Joint Editors:

Third Series, No. 30

Contents of Volume 95, Part 2, June, 1954

Smyth, J. D. A Technique for the Histochemical Demonstration of Polyphenol Oxidase and its application to Egg-shell Formation in Helminths and Byssus Formation in Mytilus.

Perry, J. S. A Plastic Lacquer Substitute for Coverslips.

Lacy, D. The Golgi Apparatus and Lipoidal Bodies in Exocrine and Endocrine Cells in the Pancreas of Man.

Jones, W. C. Spicule Form in Leucosolenia complicata.

Matthews, D. C. A Comparative Study of the Spermatophores of three Scyllarid Lobsters (Parribacus antarcticus, Scyllarides squamosus, and Scyllarus martensii).

Rankin, J. J. An Investigation of the Innervation of the Thymus Gland of the Common Mouse, Mus musculus.

Wells, M. J. The Thoracic Glands of Hemiptera Heteroptera.

Nayar, K. K. The Structure of the Corpus Cardiacum of Locusta migratoria.

Wells, G. P. The Mechanism of Proboscis Movement in Arenicola.

Subscription Price per Volume of 4 Parts £4. 4s. Single Parts 30s. net

OXFORD UNIVERSITY PRESS LONDON E.C.4
Contributors can avoid delay in the publication of their work by conforming with the following arrangements:

The Journal of Experimental Biology will publish contributions in experimental biology and comparative physiology, whether zoological or botanical. Every paper must contain a summary of the chief results of the enquiry. Authors are requested to present their work in as concise a form as possible. They will receive 50 copies of their papers free; additional copies, not exceeding 100 (except in special cases), may be purchased and should be ordered when the proofs are returned to the Editors.

All communications should be addressed to the Editors,

MANUSCRIPTS:

MSS. should be typewritten (double spacing) on one side only of the paper, and the pages should be numbered. All paragraphs to be printed in small type should be indicated by adding a line at the side of the copy. Tables and Legends should be on separate sheets from the rest of the MS. and should be numbered. The place where they are to be inserted in the text should be indicated in the margin of the MS. Bibliography should be given under the heading of 'References' and in the following form: Surname of authors (in alphabetical order), initials, date of publication, title of paper, title of journal (abbreviated according to the World List of Scientific Periodicals), volume and pages of reference (first and last). In the text a reference should be quoted by the author's name and date (in brackets), and not by the numerical order of the paper in the list of references. All names of journals and books will be printed in italics.

Bodies of numerical data, too extensive for complete publication, should be summarized for discussion, and the originals deposited in the Archives established for this purpose at the British Museum (Natural History).

ILLUSTRATIONS:

(i) Line blocks. These should be used whenever possible. Illustrations should be pen drawings in Indian ink (jet black and waterproof) on smooth white Bristol board, heavy drawing paper or good quality tracing paper. Drawings must not be folded or creased in any way. Lettering should be temporarily and lightly put in by the author in soft pencil. Where considerable reduction is required it is essential that the drawing be of such a character as to bear such reduction. All brush work, tinting or pencil shading is to be avoided.

Charts and curves can often be drawn to best advantage on graph paper ruled in pale blue. The blue lines, while ensuring accuracy, are easily eliminated by the printer, only the blackened lines that are desired remaining.

(ii) Text half-tone blocks. These are suitable for illustrations involving brushwork, or in which the depth of shading is an essential feature. They can be used for such things as oscillograph records and some photographs can be reproduced in this way, a good glossy bromide print being required. Illustrations should be gummed on white card, grouped and numbered as they are to appear in print. All lettering should be shown in position on a covering sheet of transparent paper.

(iii) Plates. Plates should be used only for illustrations, such as photomicrographs, in which the most accurate reproduction of fine detail is called for. Plates are expensive and the Editors may require an author to defray the cost of plates which in their opinion are not essential. The photographs making up the plate should be gummed on white card, grouped and numbered as they are to appear in print. Exclusive of margin the plate figures should not cover, when reduced, an area greater than 7½ in. x 5 in. in width when ready for reproduction as a single plate, or 7½ in. x 11½ in. in the case of double plates. All lettering should be shown in position on a covering sheet of transparent paper.

Authors are asked not to submit sheets of illustrations which are more than foolscap size; or, if this cannot be avoided, to include photographic reductions for the convenience of referees.

PROOFSHEETS:

Authors will receive one set of slip proof for correction and return to the Editors. A page proof will also be sent if the slip proof is marked by the author 'Revise'. An allowance of ten shillings per sheet of sixteen pages will be made for alterations apart from printer's errors. Authors may be charged for any excess over this average.

THE SOCIETY FOR EXPERIMENTAL BIOLOGY

The Society exists for the promotion of experimental biology. It holds Conferences, generally four times a year, at which the results of experimental investigations are presented and discussed. The Journal of Experimental Biology is the medium of publication of the Society. Enquiries about membership of the Society should be addressed to the Secretaries:

Dr J. W. L. Beament, Department of Zoology, Cambridge
Dr R. Scott Russell, Department of Agriculture, Oxford
