PUBLISHER’S NOTE

Hans H. Hoppeler
Editor-in-Chief, Journal of Experimental Biology

This Publisher’s Note relates to the article ‘Modulation of muscle–tendon interaction in the human triceps surae during an energy dissipation task’ by Werkhausen et al. (2017).

Electromyographic (EMG) data in the first posted version of the Accepted manuscript have been corrected because a bug in the version of the software used to acquire and synchronise signals introduced a systematic delay in the acquisition of this type of data. The updated data indicate that, instead of the third phase, EMG activity of gastrocnemius and soleus muscles peaked in the first and second phase of the analysed period, respectively. The main conclusion of the article is not affected but amendments in the text have been made where EMG activity is mentioned and Fig. 4 and Fig. 5 have been corrected.
