During the past twelve years or so our knowledge of fish diseases, especially with respect to therapy, has advanced considerably. Many new drugs have become available and more sophisticated treatments, including food additions and injection therapy, have come into general use.

This comprehensive review of the main causative agents of fish diseases and the drugs and chemicals available for their treatment forms an accurate and reliable reference source for all aquarists and pondkeepers. In addition the information included on diseases of economic importance will prove invaluable to all professional fish breeders.

A BIOLOGIST REMEMBERS

Karl Von Frisch

The fascinating autobiography of the man whose work on the honey-bee and sensory behaviour of fishes is world renowned.

Childhood—the idyllic family home on Lake Wolfgang near Salzburg—his brilliant academic career and his experiences in two world wars—‘A Biologist Remembers’ is the first volume in a new series of International Monographs in History and Philosophy of Science.

History and Philosophy of Science.

202 pages/45 illustrations/37s. 6d./\$6.00

INTERNATIONAL SERIES OF MONOGRAPHS IN PURE AND APPLIED BIOLOGY

This important and well established series, with some 80 titles already published, has many distinguished contributors in the fields of Botany, Plant Physiology, Zoology, Physiological Sciences, Biochemistry and Oral Biology. A complete list of these titles is available on request from the Textbook Manager, **Pergamon Press Ltd.**, Headington Hill Hall, Oxford, or from any of the offices listed below.
